POPEYES LOUISIANA KITCHEN

Tim Hortons

CLEARVIEW, with over **24 years** of experience focused **exclusively** on servicing our **10,000 multi-unit restaurant** customers, is intimately familiar with the intricacies of **inventory, financial, and labor management** within a busy, competitive, and lean business.

Having built and refined a robust management platform directly with industry leaders, we have a long, proven history of helping restaurants succeed. Used daily by thousands of restaurants, CLEARVIEW is the hub that maintains order and harmony between all the disparate informational conduits that make up and interact with a restaurant's back office.

Our Customers. Our Partners.

Save 2-3% on costs of goods sold, increase count accuracy and minimize time spent counting
CLEARVIEW INVENTORY

Inventory Forecasting
Ensures that you order & prepare enough stock to meet the upcoming menu/ingredient demands while minimizing stock overhead and waste costs.

Menu Promotion Planning
Automatically calculates projected increases & decreases in menu item demand based on upcoming promotions to ensure maximum efficiency even during spike periods.

Suggested Ordering
Inventory forecasting directly integrates with your food and paper orders, allowing you to remain lean while still meeting demand. Automatic calculation of "stock on hand" and "build to" levels needed to last until your next delivery.

Real-time Stock Levels
Proactively monitor theoretical on hand stock levels and expected run out dates using up to the minute sales and waste information. Ensure your restaurant always has proper stock levels and avoid spoilage by transferring excess stock to other restaurants with lower levels

Quick & Accurate Stock Counts
Mobile and tablet experience, as well as a fully functional offline mode, makes counting stock a breeze! With the ability to customize your count sheets to match the layout of your restaurant, CLEARVIEW shows you what your stock levels should be directly as your counting to ensure nothing is missed.

Cost of Goods Sold (F.I.F.O)
First In First Out (FIFO) cost of usage engine takes all of your purchase and transfer history, to build out an exact trail of all stock coming into your restaurant, in what quantities and price.

Inventory Usage Variance
Quickly pinpoint the top 20 inventory items with large opportunity for savings and begin building an action plan to ensure correct preparation, portioning, staff conception procedures are being followed. Monitor these items closely by running daily, or even mid-day, counts until the variance levels are under control

Production Planning
Advanced inventory forecasting directly influences your production plan by looking at 15-minute level expected demand of specific menu and stock items and using that   detail to calculate your "build to" and "hold at" levels for you.

CLEARVIEW
A Panasonic Company

Know how your business is performing
CLEARVIEW FINANCIAL

Sales Forecasting
Predictive forecasting of sales, guest counts & menu items, all the way down to 15-minute intervals, ensures that your restaurant is properly prepared to efficiently serve your customers the product they love in a timely manner.

Daily Task Automation
All POS transactions, including cash related activities such as payouts, automatically, recorded for you. No manual entry required.

Flexible Reporting
Instantly view sales related performance for any time period, including real-time analysis for current business day. Ability to focus on single restaurant, custom groups or consolidated results for your entire organization.

Real Time Insights
Make adjustments on the fly to improve operations using real-time data driven insights. With Clearview's up to the minute sales & labor insights, you're always on top and in charge.

Dashboard Reporting
Reduce the noise and ensure you are quickly able to focus on the most important areas of your business by customizing your preferred KPI and associated thresholds. Become proactive instead of reactive!

POS Transaction Analysis
Full visibility into transaction level detail information from your POS system enables you to pinpoint anomalies in transaction types, quantity & amounts across all cashiers, registers & time of day.

Flexible P&L Engine
The Clearview P&L engine is fully integrated within your back office, which means that all related revenue and cost centers are automatically calculated based on the week/month actual activity (sales, labor, inventory etc). Customized to your particular needs or pre-configured for the corporate standard.

Accounting & Corporate
Reduce manual labor and eliminate errors by taking advantage of Clearview's ability to export your GL to the accounting package of your choice. Automate the submission of Sales/Rent/Royalty related results to corporate data warehouses.

Real-time Labor insights on labor percent, sales or transactions per man hour, who's late, who's on the clock, who's on break, who's at risk of overtime… and more

CLEARVIEW LABOR

Labor Forecasting
Suggested schedule accurately reflects your organization's required staffing levels based on custom service level targets and predicted customer volume and predicted customer volume

HR Suite
Manage all aspects of HR in one centralized location and have that information seamlessly transmit to other related systems such as payroll. Time tracking, time-off requests, reviews, certifications and pay & benefit management.

Employee Engagement
Ensure employees stay connected with their manager, restaurant and schedule with the CLEARVIEW employee portal. Staff: View messages & news bulletins from management, be notified when their schedule has been posted, reminded of their upcoming shifts, and request time off and receive responses from management. Managers: Send messages to one or more employees, post news bulletins about important information all staff are required to see, respond to time-off requests, and push schedule modifications.

Optimized Scheduling
Set company and restaurant targets based on transaction or sales levels to have suggested ideal staff levels across all times of the day.

Regional Regulation Guidance
Ensure labor compliant schedules by setting min/max/target shift lengths, minimum number of hours between shifts and maximum number of consecutive working days.

Real-time Labor Insights
Proactive, data driven decision making based on insights for current business days labor percent, sales or transactions per man hour results, attendance, and who's at risk of overtime.

Full Audit Trail
Full trail of all manual changes to employee files and timecards to ensure you are protected. Timecards: Monitor every change related to clock in/out, breaks and amount paid. Employees: Monitor each change related to pay, store assignments, reviews, and personal contact information.

Payroll Made Easy
CLEARVIEW is integrated with the top payroll providers and makes the review and submission of payroll a breeze. With time punch activity being consolidated over the course of your payroll period, automatically calculate overtime pay based on your specific regional regulations. Submission to your payroll provider is a simple single click away.
